

Quality products with environment in focus

Concept

To meet the need in professional, industrial cleaning by development, production and marketing of ergonomically and environmentally correct cleaning aids.

Quality and environmental policy

- To follow the market trends and closely evaluate the needs of the market.
- To select and train our employees in a way so that they live up to the needs of the market as well as our needs.
- To choose suppliers, who respect quality and the environment.
- To establish a healthy line of communication with our customers and partners.
- To keep an eye on the effectiveness of the quality and environment system and adjust according to registered needs.
- To live up to all legal requirements and other requirements that the company is subject to, including the relevant requirements in DS/EN ISO 9001:2000 and DS/EN 14001:2004.
- To provide for continuous improvement in the favour of quality and the environment.

Quality objective

It is the quality objective of DIT International HQ A/S to:

- Develop, produce and market products of a quality that places them among the best in the market.
- To obtain and seek to improve this quality at the lowest possible cost.
- To work as a reliable partner for our customers.
- To continue to aim at faster delivery.
- To ensure good and motivating conditions for the staff.
- To generate enough profit to ensure the survival, development and growth of the company.

Environmental objective

It is the environmental objective of DIT International HQ A/S to:

- Develop and market products and in this process impact the surrounding environment as little as possible.
- To continue to update legal environmental requirements or other environmental requirements that we are subject to and to make sure that we live up to these requirements.

- To seek to influence our suppliers and other collaborators to take care of the environment.
- To impact the environment as little as possible through continuous improvement in the production of our products, through process development and by use of new technology.
- To make necessary safety arrangements to minimize the burden on the environment in case of accidents.
- To work to promote our employees' and partners' interest in and understanding of our environment.

Through education, co-operation and responsiveness internally in our company to work to reduce defects and faults that have a negative impact on the environment.
